
GP - Short Video Assignment

Essence

Search the world for a short video, five minutes or so, that relates in a fairly direct way to **generative processes**, **formal systems**, or **abstract machines**. Try not to pick an advertisement. Do your best to pick a video which is:

- relevant to generative processes (formal systems and abstract machines)
- substantial
- informative
- interesting

Please do your best to select great videos!

Short Text

Place a reference to the video on your work site, along with a reference to a short document, in **pdf** format, containing the following items of information:

1. A descriptive title of the video, one that you make up for the purpose of this assignment, keeping generative processes (formal systems and abstract machines) in mind.
2. A short paragraph articulating what the video is about and how the video relates to generative processes.
3. A numeric grade for your selection determined according to the formula: $(R*40 + S*20 + I1*20 + I2*20)$, where the variables are numbers between 0 and 1 indicating the degree to which you believe the video meets the desired characteristic (see Essence).

Notes on the submission and presentation of your work

Please render your short text in **pdf** format, naming your file `shorttext.pdf`. When I invite you to submit your work via email, please do so by responding just one time to the email, just to me, **attaching the short text file, and being sure to embed a link to the video that you selected in the main text box of your email response.**

For your video presentation, you are expected to (1) walk us through your short text, and (2) play the video. We will watch a small number of videos on suitable class days .

Due Date

March, 2022. In April, we will feature one or two presentations on various class days, in order to enrich and enliven the course.
