Integration of Non Determinism with Design Principles

**Design Principles:**
I used the principle of lines in this composition, having 10 lines in vertical order. I also used the color principle by using 3 colors in succession (red / green / blue ).

**Non Determinism :**
I incorporated random color brightnesses into each line of the composition as well as using a variable size change using the stack command.

**Description :**
The piece is a simple yet complex artwork. It involves different hues of green, red and blue in vertical lining. The vertical lines overlap and combine to create a one piece of art out of the combination of many separate processes.
