Symmetry and Color

Elements of symmetry

My image consists of blue, red, yellow, and green squares. I chose these colors because I like the way they look together and they are bright. My image is symmetrical both horizontally and vertically.

Reflection on thought processes of creation

I started out with the blue squares at the center of the image. Then I branched out to the right building the first section of the image from left to right. When that portion of the image was complete I branch out to the left and built that portion of the image from left to right. When that portion was finished I turned the painter around and repeated the steps.

Identifying a theme and producing variations

The colors of the squares could be changed. Instead of a blue border you could try a black one. The size of the squares could be increased or decreases. The image could be rotated.
