

BNF Assignment (Problem Set #1):

Abstract: In this assignment we were asked to create BNF grammars based on the given language, draw BNF trees and define/explain BNF to a freshman computer science major.

Problem 1 – Laughter

Problem 2 – SQN

1. $\langle SQN \rangle ::= 0 \mid 1\langle one \rangle \mid 2\langle two \rangle \mid 3\langle three \rangle$
 $\langle one \rangle ::= \langle empty \rangle \mid 2\langle two \rangle \mid 3\langle three \rangle \mid 0\langle zero \rangle$
 $\langle two \rangle ::= \langle empty \rangle \mid 1\langle one \rangle \mid 3\langle three \rangle \mid 0\langle zero \rangle$
 $\langle three \rangle ::= \langle empty \rangle \mid 1\langle one \rangle \mid 2\langle two \rangle \mid 0\langle zero \rangle$
 $\langle zero \rangle ::= \langle empty \rangle \mid 1\langle one \rangle \mid 2\langle two \rangle \mid 3\langle three \rangle$

4. When trying to create a parse tree for the number 1223 the problem is the repeating 2.

When getting to the first 2, it is physically impossible in this language to produce another 2 as an output. In this language you can only produce a 1, 3, 0 or $\langle empty \rangle$ after producing a 2.

Problem 3 – BXR

1. $\langle BXR \rangle ::= \#t \mid \#f \mid \langle \text{Setup} \rangle \langle \text{Setup} \rangle$
 $\langle \text{op} \rangle ::= \text{and} \mid \text{or} \mid \text{not}$
 $\langle \text{Setup} \rangle ::= \langle \text{Setup} \rangle \langle \text{Setup} \rangle \mid (\langle \text{op} \rangle \langle M \rangle) \mid \langle \text{empty} \rangle$
 $\langle M \rangle ::= (\langle \text{op} \rangle \langle M \rangle) \mid \#t \langle M \rangle \mid \#f \langle M \rangle \mid \langle \text{empty} \rangle$

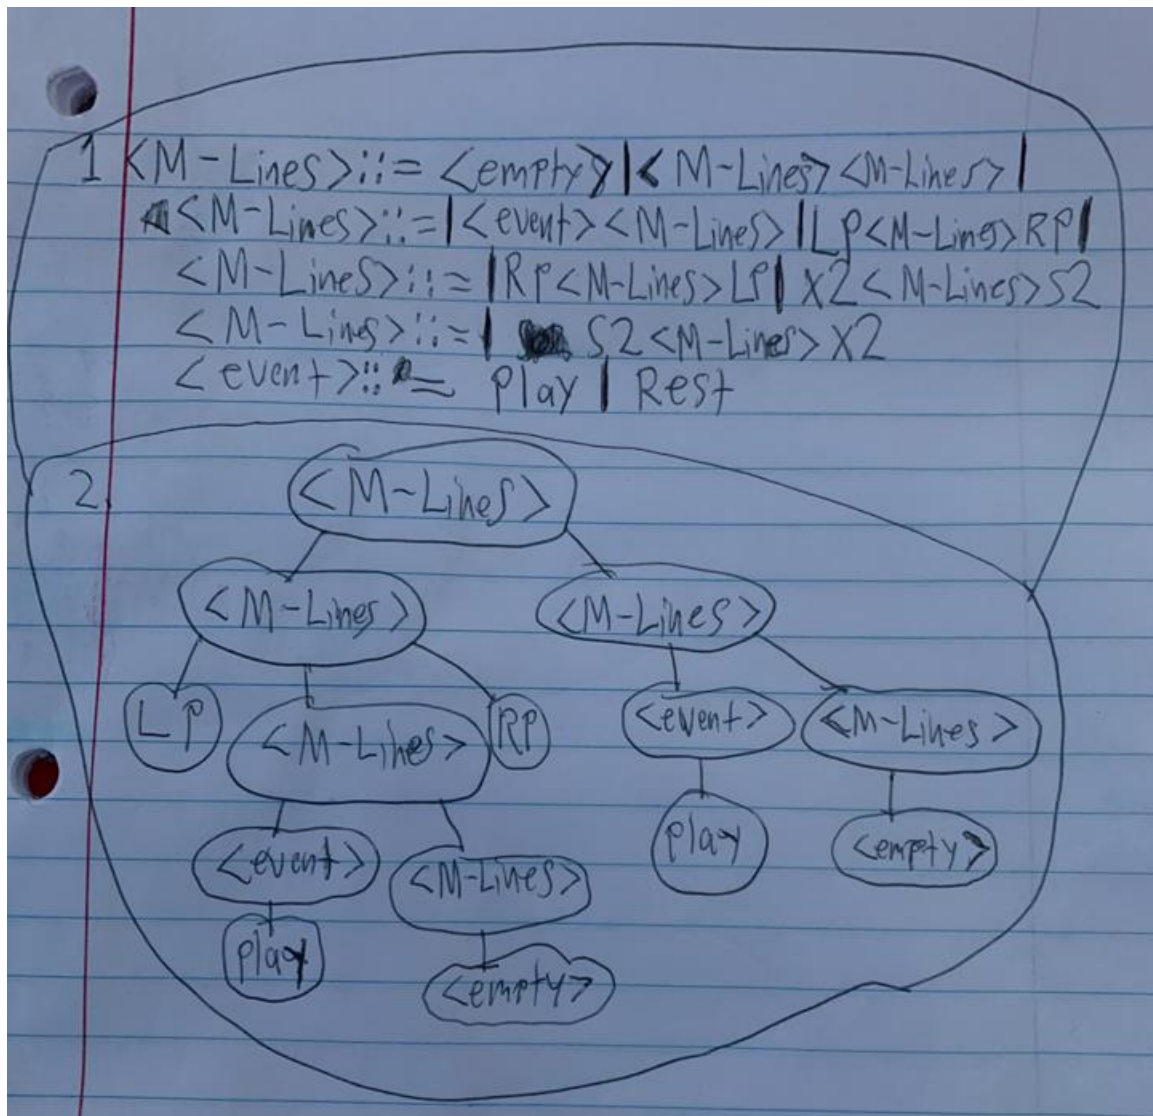

Problem 4 – LSS

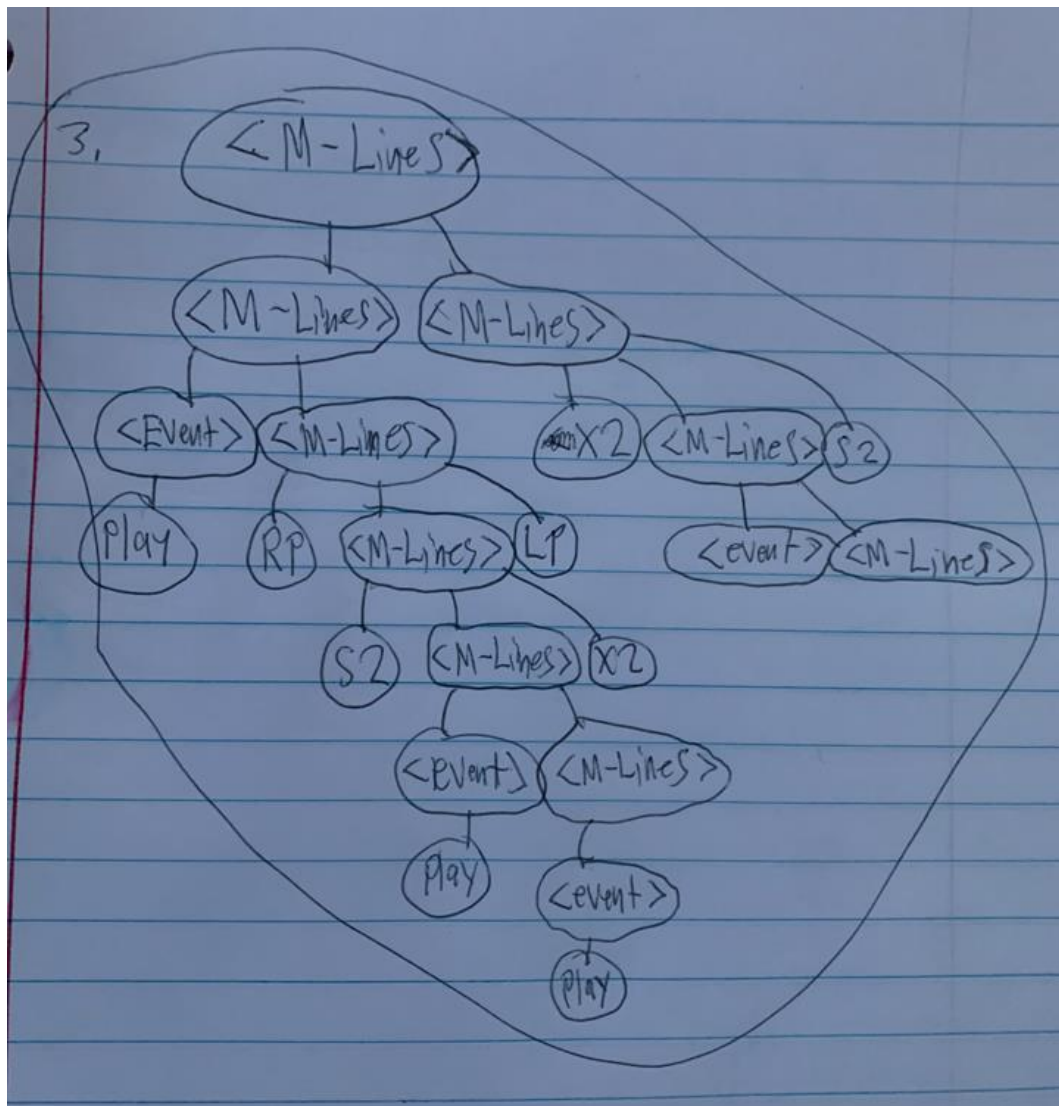

1. $\langle \text{line segment} \rangle ::= \langle \text{empty} \rangle \mid \langle \text{line segment} \rangle \langle \text{line segment} \rangle \mid \langle D \rangle \langle A \rangle \langle C \rangle$
 $\langle C \rangle ::= \text{Red} \mid \text{Blue} \mid \text{Black}$

Problem 5 – M-Lines

Problem 6 – What is BNF?

B.N.F. stands for Backus Naur Form and is used in order to express the syntax of a programming language. Learning Backus Naur Form can offer deep insight for a computer science by laying out the tools and rules that you must adhere to in order for progress and solidify understanding between the computer scientist and the tool they are using. BNF makes use of tokens, nonterminal, productions and of course the start symbol.
